NICO RUBINO

Naples, Florida | Relocating to St. Petersburg, Florida (Q4 2026)
rubinonico.jobs@gmail.com | 239-227-3823 | rubinonico.github.io/portfolio

PROFILE

Accounting student and operations generalist with two years of accounts payable, accounts receivable, reconciliation, and multi-entity compliance work inside a physician practice. Builds Python automation for document and payer workflows. Independent quantitative researcher with published negative results and a falsification-first methodology. Seeking entry-level accounting, bookkeeping, or financial operations work in Tampa Bay, with an emphasis on roles that reward systems building alongside the ledger.

EDUCATION

Western Governors University *Remote*
Bachelor of Science, Accounting (In Progress) Expected Spring 2027
Relevant Coursework: Financial Accounting, Managerial Accounting, Federal Taxation, Business Law, Corporate Finance, Data Management. Progressing toward CPA licensure eligibility.

PROFESSIONAL EXPERIENCE

Mark P. Rubino MD, LLC *Naples, Florida*
Practice Operations and Technology Associate 2024 - Present
Process accounts payable end to end: vendor invoice intake, expense coding, approval routing, and payment scheduling.
Reconcile bank and expense accounts monthly and prepare the P&L, expense categorization, and payroll records used for annual tax preparation by the external CPA.
Manage accounts receivable and the revenue cycle: charge capture, claim submission, denial management, appeal drafting, and follow-up on outstanding balances across commercial and Medicare Advantage payers.
Maintain multi-state entity compliance for a Wyoming holding LLC and a Florida operating LLC: annual registered agent coordination, state filings, business entity formation documents, and resolution of an IRS e-filing rejection (IND-031-04).
Oversaw charge capture validation and payer policy compliance for neurology-specific billing, including coding review against payer coverage determinations.
Built a Python automation framework for records request processing and payer pipeline management, integrating the AthenaOne REST API, CoverMyMeds ePA webhooks, and fax ingestion through an OCR-to-classification-to-routing pipeline. Architecture enforces PHI boundaries at the routing layer so no patient data reaches external APIs.
Led a practice systems migration and rebuilt the communications stack: new EHR platform with zero downtime during patient hours, vendor and IT contractor management, and records handling under HIPAA.

Whole Foods Market *Naples, Florida*
Chef de Partie, Prepared Foods (Pizza and Chef's Case) 2022 - 2024
Executed high-volume prepared food production in a USDA and FDA regulated commercial kitchen; maintained HACCP compliance, cold-chain integrity, and portion-cost controls.
Managed station inventory rotation, waste reduction, and real-time production pacing against demand; supervised and trained three to five team members per shift.

INDEPENDENT RESEARCH AND PROJECTS

Systematic Quantitative Research *Independent*
Sole Researcher 2024 - Present
Built a Python research framework for systematic strategy development: data ingestion across multiple asset classes, signal computation, and walk-forward validation with embargo periods and sequential kill gates.
Implemented HMM regime detection, spectral graph analysis for spatial arbitrage, causal temporal convolutional models, and volatility dynamics modeling; evaluated every strategy out of sample only.
Documented 50+ pages of technical research under version control, including a published post-mortem on a method that failed (rank-space topological arbitrage, defeated by single-factor dominance in the test universe).

Healthcare Automation Framework *Independent*
Sole Developer 2024 - Present
Designed an OCR-to-classification-to-routing pipeline integrating the AthenaOne REST API, CoverMyMeds ePA webhooks, and fax ingestion, replacing manual document triage in a live practice.
Enforced HIPAA compliance architecturally: PHI boundary at the data-routing layer, with no patient data leaving the local boundary.

Multi-Agent Orchestration Infrastructure *Independent*

Sole Developer 2024 - Present

Architected model routing across tiered providers with automated project scaffolding, a persistent skill library, and cross-session memory for research and operations pipelines.

Built 15+ production agent skills used daily for payer workflows, documentation, and writing tooling.

Game Engine and Simulation Tools *Independent*

Sole Developer 2025 - Present

Built Five Card Draw and Texas Hold'em engines in vanilla JavaScript, HTML, and CSS: hand evaluation, betting rounds, AI opponents, and Monte Carlo style outcome simulation. Playable at rubinonico.github.io/portfolio

Personal Knowledge and Retrieval Architecture *Independent*

Sole Developer 2025 - Present

Hybrid retrieval over a 47+ document corpus combining FTS5 keyword search for exact terms with a semantic layer for conceptual queries; navigation protocol across 65+ project indexes.

Homelab and Hardware Prototyping *Independent*

Sole Builder 2025 - Present

Deployed a Proxmox virtualization host with NAS storage, GPU pass-through for local model inference, and containerized services; designed a low-cost multi-sensor instrumentation system (refractive index, temperature, conductivity) and a USB hardware security key.

LEADERSHIP AND ACTIVITIES

Scouting America, Troop 165 *Naples, Florida*

Assistant Scoutmaster 2022 - Present

Lead a youth unit in leadership development, wilderness preparedness, and civic responsibility: plan and execute camping expeditions, merit badge instruction, and service projects. Completed a twelve-day backcountry trek at Philmont Scout Ranch.

TECHNICAL SKILLS

Accounting and Finance: Accounts Payable, Accounts Receivable, Bank and Expense Reconciliation, Revenue Cycle Management, Denial and Appeal Management, Payroll Records, P&L Preparation, Entity Compliance, Multi-State Filings.

Programming and Data: Python (pandas, NumPy, PyTorch), SQL, JavaScript, Git, Docker, REST API Integration, OCR Pipelines, YAML and JSON.

Quantitative Methods: Walk-Forward Backtesting, Statistical Hypothesis Testing, HMM Regime Detection, Spectral Graph Theory, HAR Volatility Modeling, Copula Modeling, Cointegration Analysis, Kelly Criterion and Position Sizing, Risk Management Frameworks.

AI and Automation: LLM Agent Orchestration, MCP Server Architecture, Retrieval-Augmented Generation, Self-Hosted LLMs, Workflow Automation (n8n), Agent Harnesses, Technical Specification Writing.

Operations: Practice Operations Management, Vendor Management, Legal Document Drafting, Records and Document Management, Onboarding and Training Program Development, Stakeholder Coordination.

Compliance: HIPAA, Revenue Cycle and Payer Policy, Entity Management and Filings, HACCP and Food Safety.

CERTIFICATIONS

QuickBooks ProAdvisor (in progress) | Google IT Support Professional Certificate (2021)
